Company Overview

StackUnited is a full-service technology and design company specializing in web development, digital content storage, distribution and streaming. We are presently contracted as the development team for a rapidly growing platform in the exciting, fast paced, multi-billion-dollar adult technology industry, the StackUnited team is composed of open minded, ethical, passionate people committed to expanding the utilization of applicable technologies today, and in the future to propel the needs of business and consumers alike.

We firmly believe our success stems from the desire to empower our teammates to believe anything is possible and deliver exceptional results. As Steve Jobs once said, "...while some may see them as the crazy ones, we see genius, because the ones who are crazy enough to think that they can change the world, are the ones who do." If you are ready to join a life changing team, we are ready to hear from you!

Position Summary

The Senior Front End JavaScript Engineer is highly skilled with Vue.js. The primary duty is to develop efficient user-facing web applications and components. Then, implement them with the Vue.js framework, following generally accepted practices and workflows. This person will produce robust, secure, modular, and maintainable code. They will coordinate with other team members, including back-end developers and UX/UI designers. Collaboration, communication, and a dedication to premier user experiences are imperative to the success of this position. Applicants should be familiar with React or willing to become familiar with React.

Additional responsibilities include the implementation of automated testing integrated into development and maintenance workflows, staying up-to-date on new developments in the JavaScript and Vue.js space, keeping an eye on security updates and issues found with Vue.js and all project dependencies. You will need to demonstrate initiative and leadership, overseeing a team of front-end developers as well as proposing upgrades and updates necessary for advanced security and development.

We are seeking experienced persons who want to advance their skill set, have a strong work ethic, perform well in a fast-paced environment, are able to multitask, and work in harmony with others.

Responsibilities

- Developing user-facing applications using Vue.js
- Familiar with React a plus (Must be willingness to learn React)
- Building modular and reusable components and libraries
- Optimizing your application for performance
- Implementing automated testing integrated into development and maintenance workflows
- Staying up-to-date with all recent developments in the JavaScript and Vue.js space
- Keeping an eye on security updates and issues found with Vue.js and all project dependencies
- Proposing any upgrades and updates necessary for keeping up with modern security and development best practices
- Working, reviewing and mentoring mid and junior front-end developers

Requirements

- Excellent understanding, good written and proficient verbal English
- BS in Computer Science or Software Engineering
- Master's in Computer Science a plus
- 5+ Years' experience with the JavaScript language and its modern ES6+ syntax and features
- 5+ Years' experience with Vue.js framework and its core principles such as components, reactivity, and the virtual DOM
- 2+ Years' experience with the Vue.js ecosystem, including Vue CLI, Vuex, Vue Router, and Nuxt.js
- Good understanding of HTML5 and CSS3
- Understanding of server-side rendering and its benefits and use cases
- Knowledge of functional programming and object-oriented programming paradigms
- Ability to write efficient, secure, well-documented, and clean JavaScript code
- Familiarity with automated JavaScript testing, specifically testing frameworks such as Jest or Mocha
- Proficiency with modern development tools, like Babel, Webpack, and Git
- Experience with both consuming and designing RESTful APIs
- Experience working with older version of Javascript and JQuery
- Test and deploy applications and systems
- Revise, update, refactor and debug code
- Improve existing software
- Develop documentation throughout the software development life cycle (SDLC)
- Serve as an expert on applications and provide technical support
- Manage a 2–4-person team of Mid-Level PHP Developers
